Institute For Stem Cell Biology And Regenerative Medicine

Ref No: INS/F-5789//2017-2018(Y)

Specification for Laser Needle Puller

1. System should be CO₂ laser based micropipette puller which pulls two symmetrical pipettes with each pull.
2. System should be ideal for applications such as nanospray and Insect egg injection.
3. System should have safe heat mode to protect and extend filament life.
4. System should have Jaw temperature sensor helps define ideal pulling conditions.
5. System should have Ramp test feature for different capillary glass/quartz tubes, more easily accessed and can now be stored and referenced within each program.
6. System should have Consistent and reliable pulled micropipettes with tip diameter less than 0.03 μ m from Quartz, aluminosilicate and borosilicate glass capillaries.
7. System should have time and delay cooling modes for filament and capillary tubes.
8. System should support Two symmetrical pipettes with each pull.
9. System should have Optimized velocity sensing circuit for maximized sensitivity and reproducibility.
10. System should have Self-contained air supply with filtration system.
11. System should have Environmental chamber for Humidity control and programmable air pressure.
12. System should have LCD display
13. System should have Pipette Cookbook program directory.
14. System should have Help topics and error detection feature.
15. System should record of last two pull results.
16. System should have supply of 230V, 50HZ
17. System should be CE/ISO certified
18. System should have the warranty for 3years.
19. System should be supplied with accessories like glass capillary tubes with different diameter and length for required to function.
